1 Application

The PFM 100 is used for measuring the differential pressure on both sides of a valve in hydronic systems.

The set consists of :

- One PFM 100 Measuring Instrument.
- Two hoses with couplings.
- Two needles incl. ball valves.

Flow and pressure can be displayed in various units, which you can choose from in the menu.

The PFM 100 can communicate with you in one of 10 possible languages.

Please note that the pressure unit must not be exposed to sub-zero temperatures. The pressure unit must at all times be stored at temperatures above 0° C.

2. Air the hoses.
3. Connect the valve to the PFM 100.
4. Zero adjust.
 - From the main menu select the **Zeroing** option in order to correct the static pressure influence.
 - To reset the device to zero follow the instruction on the display.
5. Type in the K_v -value.

If the K_v value of the measured valve is known, it can be entered in the PFM 100 to display the valve flow.

 - From the main menu select the **K_v value** option.
 - Press the **Confirmation button** to go through the sequence of numbers.
 - Press the **Menu button** to increase / decrease the numbers.
 - Press and hold the **Confirmation button** to save and exit the menu.
